EDUCATION

Arkansas State University

M.S. in Computer Science — GPA: 4.00/4.00

Jonesboro, AR

Jan. 2026 – Expected May 2027

Arkansas State University

B.S. in Computer Science — GPA: 3.84/4.00, Dean's List

Jonesboro, AR

Aug. 2022 – Dec. 2025

EXPERIENCE

Graduate Assistant

Arkansas State University

Jan. 2026 – Present

Jonesboro, AR

- Support 100+ students across Object-Oriented Programming and Data Structures & Algorithms in C++
- Lead weekly labs and office hours, debugging student code and working through algorithmic concepts one-on-one

Software Development Engineering Intern

Nucor Corporation

May 2024 – Aug. 2024

Blytheville, AR

- Resolved 12+ production support tickets for internal applications at North America's largest steel producer
- Root-caused data-integrity defects in form submissions, tracing record loss across application logic and the SQL Server database layer
- Investigated a stale-data defect traced to a SQL Server synonym resolving to an external source
- Shipped fixes in an enterprise C#/.NET codebase via Azure DevOps, with PR review and staged release gated on senior approval

PROJECTS

Nest | *React Native, TypeScript, SQLite, Jest, Google Gemini API*

2025 – Present

- Built a 27,500-line offline-first iOS app whose dual-ledger engine separates raw cash spend from a normalized "typical month" using logged-day proration and confidence-weighted averaging
- Architected an LLM coaching feature on a stateless Vercel proxy using Gemini function-calling, with a forced-termination tool hop and Redis-backed per-device rate limiting
- Enforced an architectural rule that the app computes every figure and the model only narrates them, keeping generated text out of financial calculations
- Designed a 9-table SQLite schema with versioned migrations and validated core logic with 368 unit tests across 15 suites

Resumize | *Next.js 15, Python, FastAPI, Docker, PostgreSQL, Google Gemini API*

2025 – Present

- Launched a full-stack AI resume platform serving 100+ active users, analyzing job descriptions to generate ATS-optimized content
- Architected a containerized multi-service system orchestrating a Next.js frontend, a Python FastAPI backend, and a LaTeX compiler service
- Implemented JWT authentication and a document processing pipeline with PDF extraction and PostgreSQL persistence

Fovea | *Next.js, React, WebGazer.js, Claude API, Tailwind CSS*

HackMIT 2025

- Built an attention-tracking system gauging user focus in real time, converting raw WebGazer.js signals into structured metrics including focus duration and movement patterns
- Engineered prompts translating attention metrics into readable feedback reports for end users

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C#, C++, SQL, HTML/CSS

Frameworks: React, React Native, Next.js, Node.js, FastAPI, Flask, .NET, Tailwind CSS

Databases: PostgreSQL, Microsoft SQL Server, SQLite, Firebase, Supabase

Tools & Cloud: Git, Docker, Azure DevOps, Vercel, Jest, REST APIs

AI/GenAI: Google Gemini API, Claude API, OpenAI API, Prompt Engineering
